## Static Characteristics

■ Function Description of CN50

Pin No.	Function	Description
1	+S	Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.
2	GND	This pin connects to the negative terminal (-V). Return for DC_OK signal output.
3	RC-	Return for RC+ signal input.
4	CS (Optional)	Current sharing signal. When units are connected in parallel, the CS pins of the units should be connected to allow current balance between units.
5,8	-S	Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.
6	DC-OK	DC-OK signal is a TTL level signal, referenced to pin3(DC-OK GND). High when PSU turns on.
7	RC+	Turns the output on and off by electrical or dry contact between pin 7 (RC+) and pin 3 (RC-). 0~0.8V: Power ON, 4~10V: Power OFF.

■ Function Manual

1. Remote Control

The PSU can be turned ON/OFF by using the "Remote Control" function.

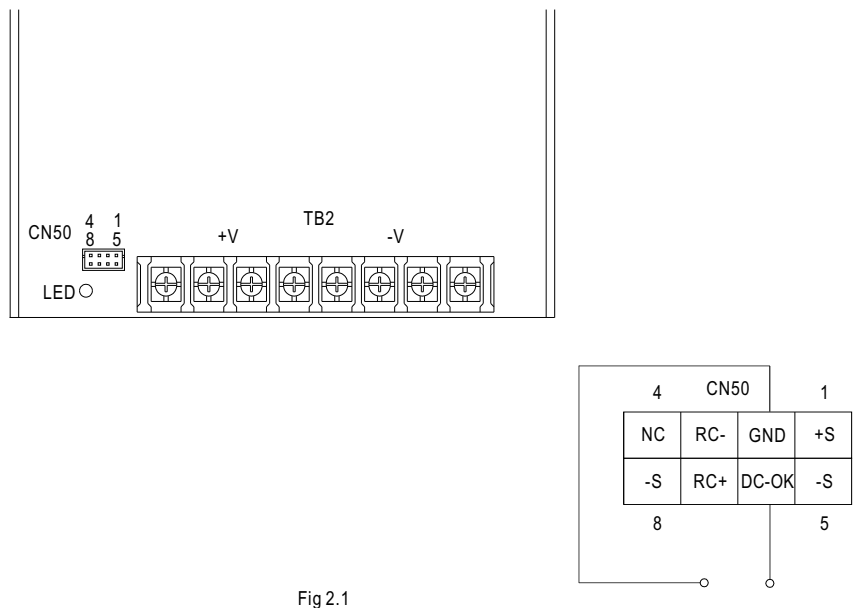

Between RC+(pin7) and RC-(pin3)	Output Status
SW OFF (0 ~ 0.8V)	ON
SW ON (4 ~ 10V)	OFF

2. DC-OK Signal

DC-OK signal is a TTL level signal. High when PSU turns on.

Between DC-OK(pin6) and GND(pin2)	Output Status
3.3 ~ 5.6V	ON
0 ~ 1V	OFF

**3. Remote Sense**

The remote sensing compensates voltage drop on the load wiring up to 0.5V.

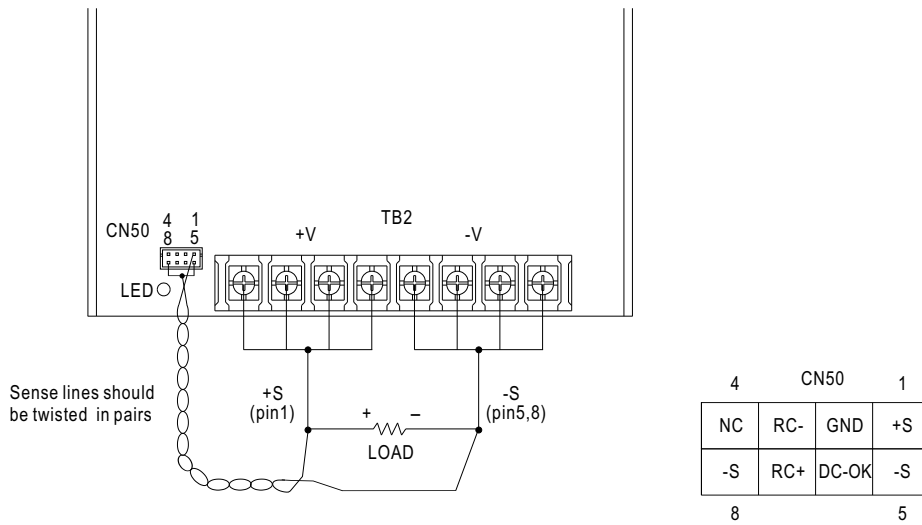

Fig 3.1

**4. Current Sharing with Remote Sensing (Optional for 24V & 48V)**

USP-500 has the built-in active current sharing function and can be connected in parallel to provide higher output power :

- (1) Parallel operation is available by connecting the units shown as below.  
(+S,-S,CS and GND are connected mutually in parallel).
- (2) Difference of output voltages among parallel units should be less than 2%.
- (3) The total output current must not exceed the value determined by the following equation.  
(output current at parallel operation)=(Rated current per unit)×(Number of unit)×0.9
- (4) In parallel operation 2 units is the maximum, please consult the manufacturer for applications of more connecting in parallel.
- (5) The power supplies should be paralleled using short and large diameter wiring and then connected to the load.

Fig 4.1

Note : 1. In parallel connection, maybe only one unit (master) operate if the total output load is less than 2% of rated load condition.  
The other PSU (slave) may go into standby mode and its output LED and relay will not turn on.  
2.2% min. of dummy load is required.
