Introduction

This manual contains information and warnings, which must be followed to ensure safe operation and retain the DC power supply in safe condition.

**WARNING**

READ “SAFETY INFORMATION” BEFORE USING, INSTALLING OR MAINTENANCE THE INSTRUMENT.

The DC power supply series are a bench top single output variable DC power supply. Stable regulated DC power supplies allowing continuous adjustment of both the output voltage and output current levels. They have been designed according to IEC1010–1 concerning safety requirements and comply with.

There are three display types for the power supply series monitoring output voltage and current. They are LCD, LED and two pointer meters. One of them is equipped to the DC power supply. There are different numbers of output voltage and output current ranges for the DC power supply series, too. These difference models of the DC power supply are available for choice of user.

1-7
WARNING

To avoid user for injury and the instrument for damage, the voltage value of AC power must be examined with same the power requirements of instrument before connect power cord to live power source.

WARNING

To avoid electrical shock, disconnect power cord from live power source and remove the test leads and any input signals before replacing the power fuses. Replace it only with the same type of fuses.
Chapter 2
Operation

Introduction

![WARNING]

To avoid electric shock or personal injury, read “Safety Precautions” and “Safety Information” before Operation.

Before making any operation always examine the DC power supply and accessories used with it for damage, contamination (excessive dirt, grease, etc.) and defects. Examine the test leads for cracked or frayed insulation and make sure the lead plugs fit snugly into the output jacks. If any abnormal exist do not attempt to make any operation.

Line Power Supply Setting (Figure 2-1)
(Only for the instrument with POWER SELECT SWITCH)
Two kinds of AC line, 220VAC 50Hz/60Hz or 110VAC 50Hz/60Hz, can be supplied to the instrument. Set it with a screwdriver to adapt your AC line.
Check to be sure that power select switch on back panel is switch to correct line voltage.
Check to be sure that fuse is correct rating current.
The applicable AC power supply range is:
220VAC ± 10% (198 to 242V~) 50Hz/60Hz or 110VAC ± 10% (98 to 122V~) 50Hz/60Hz.

NOTE: The instrument without POWER SELECT SWITCH is factory pre-set in accordance with your main voltage when your local distributor place the order with the factory.
Operating Procedure

CONSTANT VOLTAGE MODE
1. Turn the voltage regulator anti-clockwise to minimum position and the current regulator clockwise to maximum position.
2. Press the power ON / OFF switch to ON.
3. Turn the voltage regulator clockwise to that you are desirous of output voltage value.
4. Connect the positive output terminal and negative output terminal with a load or similar component.
5. The voltage regulator controls the output voltage indicator. Indicator shows that output voltage of the output terminals.

CONSTANT CURRENT MODE
1. Turn the voltage regulator clockwise to maximum position and the current regulator anti-clockwise to minimum position.
2. Press the power ON/ OFF switch to ON.
3. Connect the positive output terminal and negative output terminal with a load or similar component.
4. Turn the current regulator clockwise to that you are desirous of output current value.
5. The voltage regulator controls the output voltage indicator. The current regulator controls the output current indicator. Indicator show that output voltage and current of the output terminals.

RESTRICTED CURRENT PROTECTION MODE
1. Press the power ON/ OFF switch to ON.
2. Turn the current regulator anti-clockwise to minimum position then clockwise a little.
3. Turn the voltage regulator clockwise to that you are desirous of output voltage level position (approx. 1.5V).
4. Link the positive and negative output terminals with a wire.
5. Turn the current regulator clockwise to get the current level at which the restricted current protection will be active as you desire.
6. Remove the wire linked to the positive and negative output terminals. Connect the positive output terminal and negative output terminal with a load or similar component.
7. When the output current achieves the setting value of restricted current protection, and the restricted current protection is active.

**NOTE:** After setting of the restricted current protection, if the current regulator is turned again, the restricted current protection range will be changed.

**C.C. AND C.V. INDICATOR (Only for the instrument with C.C. and C.V. INDICATOR )**
The C.C. indicator is controlled by the constant current mode. Otherwise C.V. indicator is controlled by the constant voltage mode.

⚠️ **CAUTION**
**The DC power supply series** has perfect restricted current protection. Even so, when the output terminal is short-circuit, the DC power supply should be turned off and the short-circuit should be removed before continuing operation because the power transistors in the instrument will bear heavy.
The AC power must be switched off before servicing and servicing should be referred to a qualified person.

⚠️ **CAUTION**
Using this appliance in an environment with a strong radiated radio-frequency electromagnetic field (approximately 3V/m) may influence its measuring accuracy.
