NOTE	<p>1. Modification for charger specification may be required for different battery specification. Please contact battery vendor and MEAN WELL for details.</p> <p>2. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.</p> <p>3. This is MEAN WELL's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation.</p> <p>4. Derating may be needed under low input voltages. Please check the derating curve for more details.</p> <p>5. The charger is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 600mm*900mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on <a href="http://www.meanwell.com">http://www.meanwell.com</a>)</p> <p>6. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).</p>

Note:

When using this charger unit, please configured the system with recommended battery capacity defined by specification. Should battery capacity in use be much smaller so that user needs to set a low current for charging, under such condition it might cause higher current ripple.

**3. Remote ON-OFF Control**

The charger can be turned ON/OFF individually or along with other units in parallel by using the "Remote ON-OFF" function.

Switch Short	ON
Switch Open	OFF

**5. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)**

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 75~125% of the nominal voltage by applying EXTERNAL VOLTAGE.

**6. Output Current Programming (or, PC / remote current programming / dynamic current trim)**

※ The output current can be trimmed to 20~100% of the rated current by applying EXTERNAL VOLTAGE.

**7. Temperature Compensation**

- ⊙ To exploit the temperature compensation function, please attach the temperature sensor, NTC, to the battery or the battery's vicinity.
- ⊙ The charger is able to work normally without the NTC.

<span style="color: green;">●</span> Green	Float (stage 3)
<span style="color: orange;">●</span> Orange	Charging (stage 1 or stage 2)
<span style="color: red;">●</span> Red	The LED will present a constant red light when the abnormal status (OTP, OLP, fan fail and charging timeout) arises.
<span style="color: red;">●</span> Red (Flashing)	The LED will flash with the red light when the internal temperature reaches 60°C; under this condition, the unit still operates normally without entering OTP. (In the meantime, an alarm signal will be sent out through the PMBus interface.)
