//in most of this code I have used the arduino portpin assignments to send data to pins, you can read more about how that works here: http://www.arduino.cc/en/Reference/PortManipulation

/*********************************************************
some notes about pin setup:
4 momentary switches control waveshape (analog in 0-3)
  -sine connects to A0
  -triangle A1
  -saw A2
  -pulse A3
freq control pot (log taper) is connected to analog in 4
pulse width modulation pot (linear taper) connected to anolog in 5
PORT D (digital pins 0-7) are 8 bit function out

*********************************************************/
